Full Stack Developer Technical Challenge

World Clock

Prerequisite

This technical task will be used to gain an insight into your technical abilities and how you approach a problem. It is left slightly vague intentionally to allow you to use your initiative and be as creative as you like. You should aim to spend no longer than 1-2 hours on this task.

Challenge

You are required to create a simple web application that consumes a third-party API. The purpose of the web application is to display current local times in a selection of different time zones.

The API you will be consuming is https://worldtimeapi.org/

You can choose the number and location of time zones.

Use whatever technology stack you think is appropriate and best demonstrates your technical ability.

Upload your work to GitHub and share with james.plant@whitestores.co.uk / WS-JamesPlant

Thank you for your application, we look forward to your submission.
